This article is brought to you for free and open access by Research Library. It has been accepted for inclusion in Journal of the Department of Agriculture, Western Australia, Series 4 by an authorized administrator of Research Library. For more information, please contact jennifer.heathcote@agric.wa.gov.au, sandra.papenfus@agric.wa.gov.au.
IMPORTANT DISCLAIMER

This document has been obtained from DAFWA's research library website (researchlibrary.agric.wa.gov.au) which hosts DAFWA's archival research publications. Although reasonable care was taken to make the information in the document accurate at the time it was first published, DAFWA does not make any representations or warranties about its accuracy, reliability, currency, completeness or suitability for any particular purpose. It may be out of date, inaccurate or misleading or conflict with current laws, polices or practices. DAFWA has not reviewed or revised the information before making the document available from its research library website. Before using the information, you should carefully evaluate its accuracy, currency, completeness and relevance for your purposes. We recommend you also search for more recent information on DAFWA's research library website, DAFWA's main website (https://www.agric.wa.gov.au) and other appropriate websites and sources.

Information in, or referred to in, documents on DAFWA's research library website is not tailored to the circumstances of individual farms, people or businesses, and does not constitute legal, business, scientific, agricultural or farm management advice. We recommend before making any significant decisions, you obtain advice from appropriate professionals who have taken into account your individual circumstances and objectives.

The Chief Executive Officer of the Department of Agriculture and Food and the State of Western Australia and their employees and agents (collectively and individually referred to below as DAFWA) accept no liability whatsoever, by reason of negligence or otherwise, arising from any use or release of information in, or referred to in, this document, or any error, inaccuracy or omission in the information.
THE bulletins named in the following list are mainly reprints of articles which have appeared in “The Journal of Agriculture” and the date of the original publication has been appended to facilitate reference to bound volumes of the Journal. Except where a price is expressly stated, these bulletins may be obtained free of charge either by applying at the counter of the Department of Agriculture or by writing to the Officer-in-Charge of Publications, Department of Agriculture, Perth. If ordering by letter please quote the serial numbers of the bulletins, not the titles. Not more than ten bulletins can be supplied in response to each application.

APICULTURE

2032 Diseases of Bees—May, 1953.

2737 Weed Control in Vineyards—April, 1960.
2750 Afghan Thistle (Solanum Lysistér B. Br.)—May, 1960.
BAYER RESEARCH produces new answer to FRUIT FLY MENACE

NEW 'TRIPLE-ACTION' INSECTICIDE KILLS FRUIT FLY
— ADULTS AND MAGGOTS — AND OTHER PESTS

• BY CONTACT
• BY PENETRATION
• BY SEMI-SYSTEMIC EFFECT

HERE IS AN INSECTICIDE WHICH CONTROLS ADULT FRUIT FLY AND AT THE SAME TIME PREVENTS MAGGOT DEVELOPMENT WITHIN THE FRUIT!

LEBAYCID

is a completely new organic phosphorous insecticide developed by Farbenfabriken Bayer A.G., of Leverkusen, W. Germany—the creators of Folidol E605, Dipterex, Metasystox 'I' and Gusathion. It is unique in its power to operate three ways: as a contact spray; by partial absorption into the plants—killing maggots as they feed; and by penetration of the fruit, killing fruit fly larvae as they hatch. LEBAYCID also controls other important pome and stone fruit pests (e.g. peach tip moth and codling moth). On tomatoes, Lebaycid also shows promise as an effective means of suppressing mites, aphids and bugs.

120 M.P.H. WIND HITS TREES! ... And They Love It. Because the 120 m.p.h. air blast came from a
METTERS P.T.O. AIRMIST

The twin fantail unit for rows of small trees 12 to 16 feet apart.

The METTERS AIRMIST is a concentrated sprayer that atomises the already fine spray into a mist that blankets the trees, depositing fine drops that spread evenly for the most effective protection.

- AIRMIST spraying by the concentrate method give faster, more effective coverage without waste.
- Produces more first grade fruit. Uses only 125 gallons of water instead of 500 gallons by the old method for the same area.
- Saves 75% labour, 30% spray material and covers approximately two acres per hour.
- All components and controls are easily accessible.
- AIRMIST is the lowest cost machine of its kind.
