### BLOWFLY CONTROL IN SHEEP

The Director of Agriculture (Mr. G. K. Baron Hay) stated that a further series of mulesing and tailstripping demonstrations will be held during the next few months. These demonstrations will coincide with crutching operations in the farming areas and the practical instruction given will enable farmers to treat their own flocks.

Mulesing and tailstripping will reduce fly-strike to negligible proportions and farmers desiring demonstrations and instruction in the correct techniques are requested to apply in writing to Sheep and Wool Branch, Department of Agriculture, Perth, or to consult their nearest agricultural adviser.

***4 big ways!***

Farmers demanded these features—only one tractor tyre has them—the Australian designed, tested and proved Dunlop Super Trakgrip out-pulls, out-cleans, out-performs them all.

1. Open-centre tread wider at the butress than at the centre squeezes out all trash.

2. Angle-set reinforced butresses relieve buttress tension under extreme deflection.

3. Massive deeper and wider tread bars heavily reinforced at open centre base for immense resistance to abnormal bar distortion under load.

4. Broader treads of super-toughened rubber for long life and powerful traction.
