J. A. MALLETT

Articles which appear in the “Journal” may be reprinted, provided that the “Journal” and the authors are acknowledged.

Issued by direction of THE MINISTER FOR AGRICULTURE.

COVER PICTURE
The Salmon Gum (Eucalyptus salmonophloia) is found over a large tract of country eastward of a line from Mullewa in the north, through Carnamah, Moora, Brookton and Wagin down to Gnowangerup. Its shining lanceolate leaves and yellowish-pink to almost white bark make it one of our most attractive wheatbelt trees, and its timber is extensively used for mining purposes. The tree attains a height of 75 ft.
