**DEPARTMENTAL PUBLICATIONS**

The bulletins named in the following list are mainly reprints of articles which have appeared in "The Journal of Agriculture" and the date of the original publication has been appended to facilitate reference to bound volumes of the Journal. Except where a price is expressly stated, these bulletins may be obtained free of charge either by applying at the counter of the Department of Agriculture or by writing to the Publications Officer, Department of Agriculture, Jarrah Road, South Perth. If ordering by letter please quote the serial numbers of the bulletins. Not more than ten bulletins can be supplied in response to each application.

What's the good of water... unless you've got it where you want it?

WATER — your most priceless commodity — isn't worth a ha'penny unless you've got it at the right place at the right time.

That's where Mono scores with the most efficient, most dependable range of Pumps and Automatic Water Pressure Systems money can buy.

Why is Mono so vastly different? . . . Mono employs the world's simplest, most effective, most efficient positive displacement system. With only one moving part — without valves, gears or the need for lubrication — Mono creates a powerful continuous sucking action that stops only when you switch it off.

Without interruption — without interference from air, slush or solids in solution — your self-priming Mono continues to draw liquids while there's liquid there to get. Sand, silt and abrasives create no hazard, for Mono is built to withstand rough usage. Ask any owner. He'll tell you Mono is undoubtedly your best pump investment. Then see your Mono dealer: he will give you all the interesting facts and figures.
