CULTIVATE SALTLAND...

Seeds will be caught in the roughened surface and the rainfall will soak in instead of running off

AND PROTECT IT FROM GRAZING

Natural salt tolerant plants will colonise the area and if protected will gradually form a cover over salty areas

Protection from grazing is essential because sheep favour salty areas for camping. If the areas shown in the pictures had been given a general working and were protected from grazing for an extended period, a good start would have been made in replacing cover on the salt patch.
